

SPIKEFAST®

Handheld Canister System

Manufactured by Willamette Valley Company

1075 Arrowsmith Street Eugene, OR 97402

TEL 800.333.9826 FAX 541.284.2096

Cordless Dispensing Applicator

SPIKEFAST®

Manual Dispensing Applicator

Easy grip handle for
controlled application

Easy pump
trigger action

Comfortable length for
upright application

SPIKEFAST®

Product Information

SpikeFast® is a tough, high-performance spikehole filler material that anchors spikes with comparable strength to that of unspiked hardwood ties. It can be applied in extreme weather conditions such as pouring rain, high humidity, or freezing temperatures. SpikeFast is easy to apply, prolongs tie life, and can help increase your rail maintenance efficiency.

In addition to better rail anchoring, SpikeFast also provides faster production, allowing rail crews to re-spike more rail in less time. Because of the diverse and unique challenges faced by today's modern railroads, we have a SpikeFast application system to match every need, large or small. From motorized chassis and high-rail trucks to handheld cartridges, our versatility makes Spikefast truly unique among spike hole plugging solutions.

The SpikeFast canister system was designed to meet the demand for a simple and portable application system. One canister will fill approximately 15 cut spike holes, making it the easy solution for small bridges, frogs, or switches. The cordless applicator includes a rechargeable battery. Just insert the canisters into the applicator and pull the trigger to fill the spike holes. The handheld applicator is ideal for remote locations or critical areas where holding gage is essential and high production equipment is not available. As with all SpikeFast systems, no harsh VOC containing solvents or foaming agents are required.

SpikeFast is a patented dual component, non-foam polyurethane product which is proven to anchor spikes better and longer than other traditional plugging materials. Performance tests commissioned by national railroads indicate that SpikeFast outperforms wood plugs, polymeric foam, and epoxy foam in both lateral resistance and pull-out resistance. SpikeFast is easy to adz and ready to re-spike within 20 minutes, bonding so tightly to the spike hole that it will not dislodge during the adzing process. Moisture resistant SpikeFast displaces standing water in spike holes without excess foaming and it deeply penetrates voids, cracks, and crevices in the tie to reduce moisture infiltration and tie rot.
