

FastPatch LV

Sometimes it's all about the details. FastPatch LV is the perfect product for repairing small and narrow areas of damaged concrete, and it performs amazingly well in below-freezing temperatures. This quick-setting product has amazing strength and can fix cracks and spalled concrete on the spot.

FastPatch LV Benefits

POLYQuik's FastPatch LV product is best described as a fast-setting concrete repair solution. It has ultra-low viscosity and is most often used to repair cracked or spalled concrete. FastPatch LV has the ability to penetrate deeply into concrete and cure at below zero temperatures, which results in superior strength. Once applied, the area can be returned to service within 15 minutes! The product is also certified as safe to use in areas where food products are handled. Customer evaluations have found that the product has excellent performance in below-freezing conditions. One gallon yields enough product to repair an area of approximately 38 feet.

Low Temperature Concrete Repair

FastPatch LV
