CONCRETE CROSSTIES

FASTPATCH LV

LOW TEMPERATURE CONCRETE INSERT REPAIR

Sometimes it's all about the details. FastPatch LV is the **perfect solution for repairing inserts in concrete ties, quickly and easily.** This quick-setting product offers remarkable strength and can return the concrete tie back to service in a short period of time over a wide range of temperatures.

- >>> Easy to use and apply
- >>> Ultra-low viscosity
- >>> Cures at below zero temperatures
- >>> Low moisture sensitivity

SRP-210

METAL SHOULDER REPAIR

SRP-210 is an ideal product for **quickly and effectively repairing damaged metal shoulders.** Developed by WVCO chemists, the SRP-210 compound is designed to fill worn metal shoulders and extend the service life of concrete rail ties.

- >>> Easy to use and cures quickly
- >>> Controlled dispensing and application
- >>> Extends the life of the shoulder
- >>> Restores original geometry

CTR-100

CONCRETE RAILSEAT REPAIR

CTR-100 was developed by WVCO to answer the railroad industry's need for an outstanding concrete tie repair product. CTR-100 is time tested, meets railroad specifications, allows **quick repair of damaged ties** and gets trains back on the track with as little downtime as possible.

- >>> Repairs damaged railseal
- >>> Seals and protects concrete from future abrasion
- >>> Increases effective tie life and reduces costs
- >>> Quick cure times
